

Read the Fine Print.

When making a decision about your [water service](#) make sure you have all the information you need. How much does it cost? How long will it take for you to pay for the system? How long will it last?

Many community systems cost hundreds of thousands or millions of dollars and are financed over 40 years. Yet, a system's life is usually estimated at an average of 15-20 years. In addition to construction costs, you will have to pay your share of operating costs and water treatment requirements.

The cost of a well can be included in your home mortgage. Or, it can be financed through home equity loans or other short-term financing programs. Once paid for, you own your well! A professionally installed well will provide many years of reliable service. Minimal maintenance is required. The pump and other mechanical parts of a well can function well for 15-20 years or more.
