

SRF WIN ACT

SECURING REQUIRED FUNDING FOR
WATER INFRASTRUCTURE NOW ACT

THE CHALLENGE

STATES LACK FUNDING FOR SMALL RURAL DRINKING WATER PROJECTS

State Revolving Funds are a critical source of funding for thousands of rural drinking water projects across the nation. However, these SRFs currently lack the funding to assist most of the small drinking water systems.

The objective of this legislation is to build upon the success of the existing CWA and SDWA SRFs in delivering water infrastructure funding to communities of all sizes, through the utilization of the financing and leveraging authority available through WIFIA.

The “bundling” of water and wastewater projects that are on State Intended Use Plans into a single project is an approach that should be encouraged and can ensure that small and financially disadvantaged communities ultimately receive the benefits of WIFIA leveraging.

The SRF WIN Act leverages a \$200M appropriation to provide \$60B over 5 years for the CWA and SDWA SRFs.

WSC strongly encourages co-sponsorship of the bipartisan SRF WIN Act.

THE SOLUTION

SUPPORT THE SRF WIN ACT (S.2365/HR.4902)

There are over
40,000 small
systems serving a
population of 3,300
or less.

EPA and USDA only
funded 26% of small
systems needs in
2016.

EPA estimates
project a \$384B
shortfall in drinking
water funding over
the next 20 years.
